Course Summary

While many healthcare providers have been somewhat hesitant about fully implementing a telehealth program, the recent COVID-19 pandemic has forced them to utilize Health Insurance Portability and Accountability Act ("HIPAA") approved technology platform to meet the needs of their clients. Healthcare providers' have been working diligently since the COVID-19 Pandemic to utilize technology to meet the needs of individuals diagnosed with mental health and substance abuse problems. This workshop will focus on updating healthcare providers on telehealth COVID-19 Guidelines according to the U.S. Department of Health and Human Services ("HHS") and HIPAA Privacy Rules. Providers will also learn the necessary processes and procedures that are needed to implement an effective telehealth program that meets federal government/HIPAA standards.

Goals/Objectives

- Participants will explain definitions of telehealth and key laws that are affiliated with this platform of treatment.
- Participants will identify and explain telehealth rules and regulations of COVID -19 according to federal government standards.
- Participants will summarize various types of telemental health equipment that is needed to provide telemental health services in healthcare settings.
- To identify necessary steps that is needed to develop and implement an effective telehealth program.
- To be familiar with policies and procedures that needs to be implemented in healthcare programs (SAMHSA TIP 60).
- Participants will explain the roles and responsibilities of stakeholders to include agencies board of directors, directors, managers, supervisors, direct service staff, collateral organizations', and clients.
- Participants will have an understanding of the workflow process in developing telemental health programs.
